
Tasks To Be Performed:

1. Pull Ubuntu container
2. Run this container and map port 80 on the local
3. Install Apache2 on this container
4. Check if you are able to access the Apache page on your browser

Steps:

1. Updating the system using `sudo apt update`
2. Installing docker – `sudo apt install docker.io`
3. Remember that the docker which is installed have separated files stored in different location of your ec2 ubuntu
4. Install Ubuntu image from docker – `sudo docker pull ubuntu`
5. Once the image is downloaded, create a container from that image
 - a. `sudo docker run -it -d -p 80:80 ubuntu-web ubuntu`
6. Once the container is created, go inside the container using – `sudo docker exec ubuntu-web bash` , then install apache2 on the container
7. Once we install apache2, run it – `apt apache2` run `apachectl run apache2`

Ubuntu

Apache2 Default Page

It works!

This is the default welcome page used to test the correct operation of the Apache2 server after installation on Ubuntu systems. It is based on the equivalent page on Debian, from which the Ubuntu Apache packaging is derived. If you can read this page, it means that the Apache HTTP server installed at this site is working properly. You should **replace this file** (located at `/var/www/html/index.html`) before continuing to operate your HTTP server.

If you are a normal user of this web site and don't know what this page is about, this probably means that the site is currently unavailable due to maintenance. If the problem persists, please contact the site's administrator.

Configuration Overview

Ubuntu's Apache2 default configuration is different from the upstream default configuration, and split into several files optimized for interaction with Ubuntu tools. The configuration system is **fully documented in `/usr/share/doc/apache2/README.Debian.gz`**. Refer to this for the full documentation. Documentation for the web server itself can be found by accessing the **manual** if the `apache2-doc` package was installed on this server.

The configuration layout for an Apache2 web server installation on Ubuntu systems is as follows:

```
/etc/apache2/  
|-- apache2.conf  
|   |-- ports.conf  
|-- mods-enabled
```
